

Effect Aura

1. Introduce
2. Detail

Introduce

- The effect aura is created by two electric shaders and the Dragon Ball aura.
- Currently, particle is compatible with built-in and is written entirely based on hlsl.

Detail

Aura effect have some properties:

- Flow Texture 1, Flow Texture 2, Texture: noise texture and main texture of shader.
- Scale Texture 1/2 : scale (x,y) for Flow Texture1, scale(z,w) for Flow Texture2.
- Distortion Speed XY and Power Z: (x,y) speed move and z is scale distortion.
- Max/Min Height Cut Off: Range Cutoff effect.
- Emission of color...

Detail

Electric have some properties:

- Main Texture is base shape of one lightning bolt.
- Brightness of Color is brightness power of color.
- Scroll Speed is vector scroll of lightning bolt.
- Number of bolt - number of bolt in all uv map texture.

Detail

- Bolt Power is power of bolt fade out lightning bolt area.
- Number Line of One Bolt is quantity of line create lightning bolt from center of bolt (should is 2).
- Angle of Bolt is angle rotate of lightning bolt.
- Distortion Scale of Bolt is noise scale affect to lightning bolt.
- Vector of Bolt Distortion is direction of distortion.

Detail

- Lerp Ratio Distortion in UV Bolt is control ratio of distortion per bolt. 1 is noise, 0 is lightning bolt shape basic.
- Dissolve Speed - dissolve effect fade in, out of lightning bolt.
- Dissolve Range - range min, max of fade in, out
